

Apparatus Features

The current list of features includes:

- ECS at max. A complete Unreal Engine integration of the [data-oriented](#) workflow.
- Loyal to the ecosystem. Both C++ and Blueprint development is supported.
- Straightforward editing. Assign and customize your [Trait/Detail](#) blocks right from the [Details Panel](#) in Unreal Editor.
- Querying with ease. A versatile Component-including and Component-excluding filtering for the Mechanics.
- [Lambda](#)-based operations with an automatic argument delivery.
- Bitwise [Flagmark](#) filtering support for a boolean-based state approach.
- Multiple Details of the same class on a single Subjective are supported. All of the available Detail combinations are processed in the operating body.
- Inheritance at best. The Detail classes can be inherited for extra modularity and flexibility.
- Dedicated in-Editor user experience touches for some clear reading, validation and overall ease of use.
- Several performance optimizations: caching, fast bit-array lookups, mainline Component indexing, manual Belt assignment and more.
- Full concurrent (multi-threaded) iterating support with a dedicated compile-time [Solid](#) semantic.
- An elegant and versatile custom [networking](#) solution built upon the Unreal's replication and RPC functionality.
- [Steady-ticking](#) implementation for some extra stability of your game frame-dependent logic.
- Thoroughly documented API with a dedicated [user manual wiki pages](#).
